*On – axis PSF in log irradiance,
normalized to the peak irradiance value.*

Radial intensity profile for the broadband APLC design at 11 simulated wavelengths centered around λ_0/D and equally spatially sampled over the 10.0% bandpass. The black curve shows the average intensity across the 11 wavelength samples. The dashed red vertical lines delimit the high-contrast dark zone (between 3.6 and $14.0 \lambda_0/D$). The blue dotted line delimits the FPM radius, set to $3.7 \lambda_0/D$.

Average broadband normalized irradiance
within 0 pixels of Lyot stop misalignment.
