Fri Oct 27 20:32:23 2023

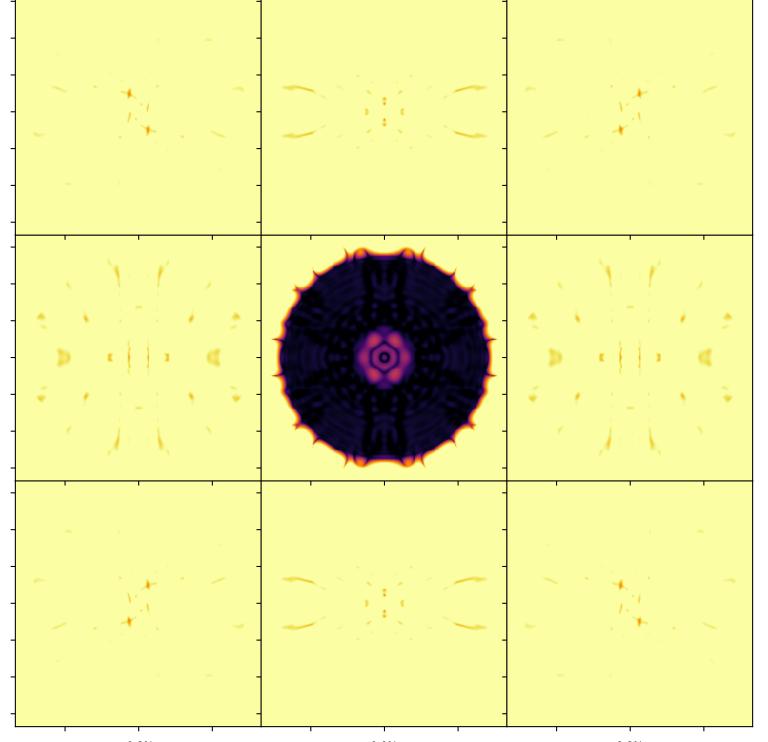

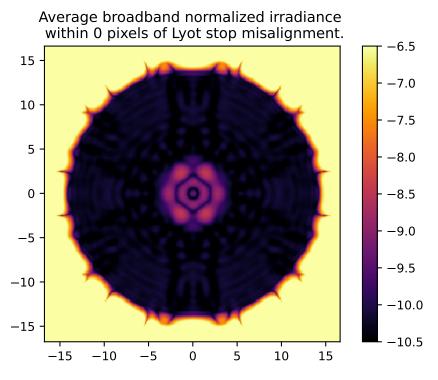

On – axis PSF in log irradiance, normalized to the peak irradiance value.

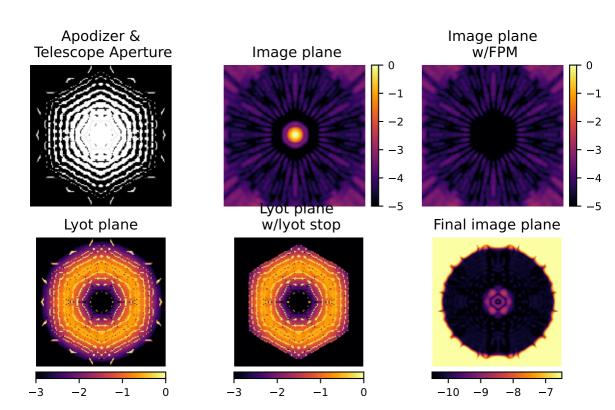

Radial intensity profile for the broadband APLC design at 11 simulated wavelengthscentered around  $\lambda_0/D$  and equally spatially sampled over the 20.0% bandpass. The black curve shows the average intensity across the 11 wavelength samples. The dashed red vertical lines delimitthe high-contrast dark zone (between 3.800000000000003 and 14.0  $\lambda_0/D$ ). The blue dotted line delimits the FPM radius, set to 3.9  $\lambda_0/D$ .

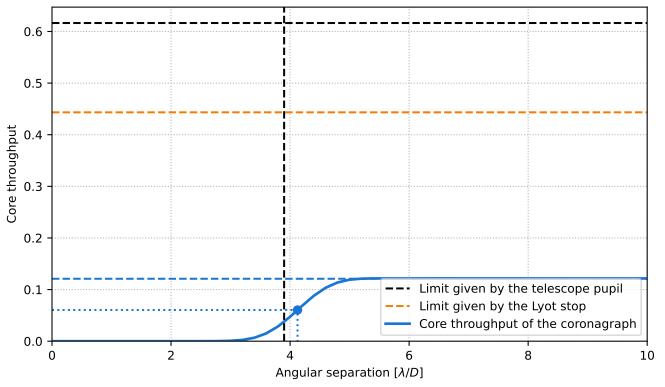

## **Analysis Summary**

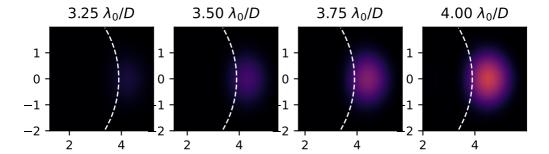

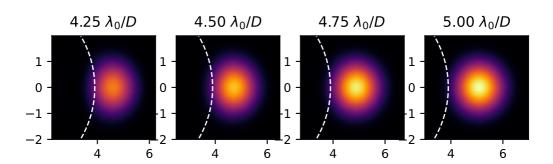

Pupil core throughput: Lyot stop core throughput: Maximum core throughput: Maximum core throughput w.r.t. pupil core throughput:

Maximum core throughput w.r.t. Lyot stop core throughput:

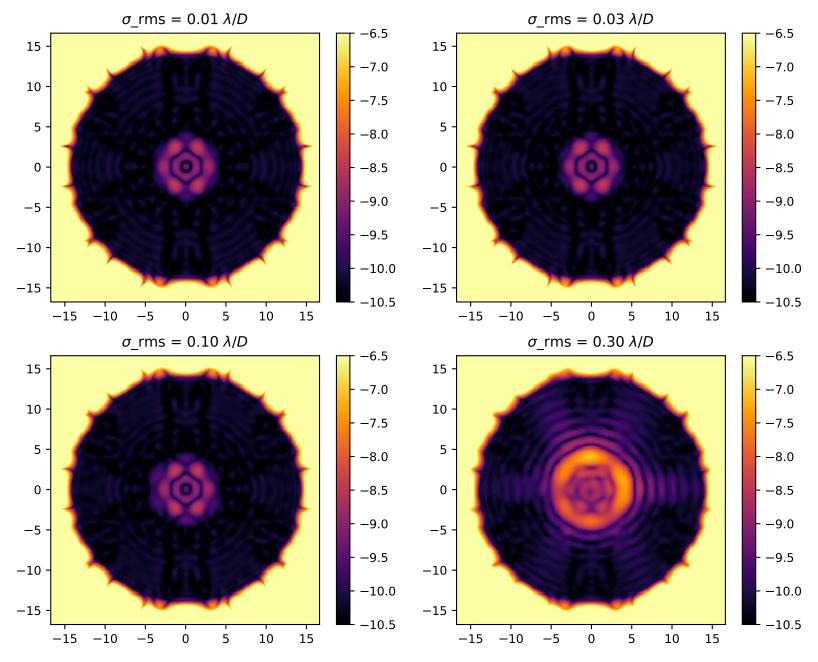

Inner working angle:

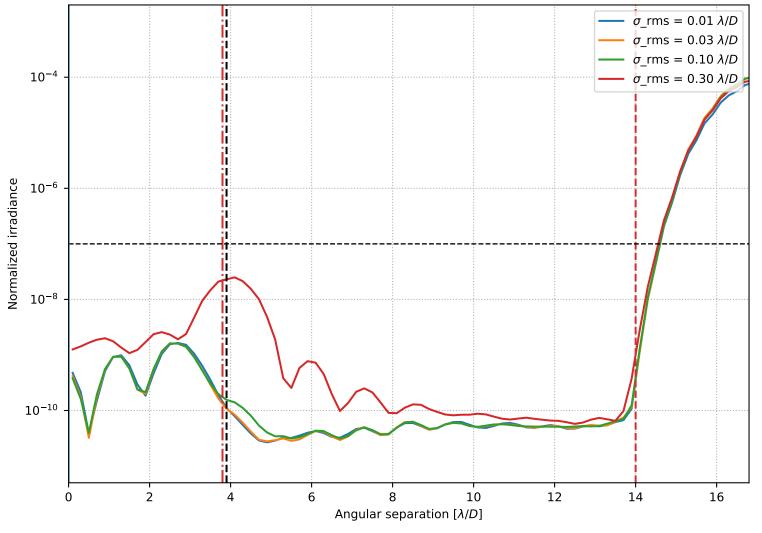

0.6163835963822561 0.44338273489435265 0.12095287570019303 0.19622987439980955 0.2727956372252816  $4.125317840975226 \lambda_0/D$ 

Broadband normalized irradiance for four representative levels of residual pointing jitter.

Azimuthally averaged raw contrast for four representative levels of rms residual pointing jitter.
